

UKG Pro Forecasting

UKG Pro® Forecasting (formerly UKG Dimensions® Forecasting) optimizes your schedules by making accurate and timely predictions based on data trends and patterns from your own business. Over time, our patented, self-tuning machine-learning (ML) algorithm automatically analyzes and learns from this data fine-tuning itself to continue providing accurate forecasts to help your business create optimized schedules that meet the demands of your business.

Past, present, and trend analyses

Deliver timely schedules to every person by using an accurate forecast:

- Effective periodic or seasonal coverage with self-tuning insights
- Leverage full power of data to use patterns in the past to predict the future
- Analyze staffing measurements to make smarter adjustments in the moment
- Ideal schedules influenced by purposeful workforce management data across the organization's history

Predictions you can trust

Shifting market conditions, location-specific needs, employee behavior, and business objectives all can impact customer demand and how labor should be aligned. Forecasting, powered by advanced AI capabilities, improves volume forecasting by analyzing special events, pooling data across the organization, and learning patterns over time.

Optimized schedules for everyone

Accurate forecasts help you create optimized schedules ensuring you're not over-staffing during slow periods or under-staffing at peak times both of which can negatively impact your business. This insight into the future also provides you people with the flexibility they need around their personal lives and at work.
